

Senior Web Developer | Client-Server Technologies | Full Stack Expertise

A committed and results-oriented professional with a strong background in the web industry (PHP). With 14 years of experience in this industry, he goes beyond goals and delivering exceptional results, has a meticulous attention to detail and a deep understanding of industry trends and market dynamics. In PHP, Laravel is a highly skilled human being and has the talent to develop innovative solutions and strategies for business growth and profit maximization. With excellent communication and leadership abilities, he is a valuable asset to any organization looking for a motivated and dynamic team player.

For a long time, I have been publishing a large number of packages for Laravel on the [JobMetric](#) GitHub account, and I feel good that I can help other programmers in this area.

Applications:

Behsod, Metanext, Seyed Kala, Larisa, Fandogh, And Other...

Open Source Project

I strongly believe that modern software development should go beyond solving problems for a single project. Code must be reusable, maintainable, and beneficial to the community.

That is why I have dedicated years to building and publishing open-source Laravel packages under the [JobMetric GitHub](#) organization.

Through these packages, I aim to Share knowledge and tools that make development faster and cleaner for other programmers.

Promote modular, testable, and scalable code design instead of one-off solutions.

Contribute back to the Laravel ecosystem, just as I have benefited from open-source myself.

For me, package development is not just coding it's about creating building blocks that others can rely on, extend, and improve.

This philosophy is what drives me as a developer, and it reflects how I approach every project I work on.

Skills

PHP, Laravel

Deep understanding of Docker (starting to learn Kubernetes)

Understand Complex Algorithms

JavaScript – JQuery – Type Script

Laravel Package Development (JobMetric GitHub Organization)

Database Optimization (Postgresql, mysql)

API Development (Fluent for Restful API)

Codex, AI-Powered Tools, Automation Pipeline

Git (Git Flow)

PostgreSQL, MySQL, MariaDb

Deep Understanding Of Linux

Jira Administration (Ability to create a smooth workflow)

Photoshop, Figma

Vuejs And NuxtJs (now learning)

React And NextJs (now learning)

Css, Bootstrap, Tailwind Css

Language

Persian – High Level

English – Upper-Intermediate (Fluent in technical discussions).

Kurdish – High Level

Achievements

Contribution to open source

(JobMetric – Laravel – Spatie – Fabric)

Obtaining certificate System Analyze from technical and professional department
